**Amendments to the Specification:**

**MAY 12 2008**

*On page 6, last paragraph, please amend as follows:*

As shown in the drawings, a high rise building is constructed by firstly installing a steel-frame pillar 23 on a shaft portion of a core 21, and is then secondly a girder 25 and a steel-frame beam 31 are installed on the steel-frame pillar 23. Then, reinforcing bars for a slab 33 and a core 21 are arranged and concretes 29 are is applied. At this point, after the reinforcing bars are arranged, the concrete may be firstly applied on the slab 33, and then may be applied on the core 21.
